DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to preventing transmission to unassigned memory locations, classified in class 710, subclass 36.
 - II. Claims 7-13, drawn to memory mapped I/O adapter request receiving, classified in class 710, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions memory mapped I/O adapter request receiving and preventing transmission to unassigned memory locations are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. Group I includes limitations directly to the prevention of transmission of data between I/O adapters associated with a specific logical partition and memory locations not assigned to said logical partition. Group II includes limitations for receiving a request from an OS image to access an I/O adapter, and to use memory mapped to the operating system image to process the request.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2182

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
